DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 6-8, 11, 14-16, 19, 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Porter (U.S. Pat. No. 5,771,645), (U.S. Pat. No. 5,497,589) in view of Menchetti (U.S. Pat. No. 5,383,317).

With regards claims 1-3, 6-8, 11, 14-16, 19, 21-22, Porter (-645) discloses an electrical access in structural insulated foam core panels comprising a first and second exterior facing sheets made from plywood, drywall, or composite gypsum 12, 14, a first and second interior facing into foam core (unlabeled), an insulated foam core 16, an electrical box 42, electrical conductors 78, 80, wire chase 20, apertures 60, 64 (see Figs. 1, 5-6) Porter (-589) discloses a structural insulated panels including a first vertical side edge having a male projection member with edge strips 129a, 129b, adapted to project into a corresponding female reception member on a adjacent panel with edge strips 134a, 134b (see Fig. 7).

Porter's (-645, -589) disclosure do not show framing struts being located between first and second sheet. Menchetti (--317) teaches a shaft wall cavity extension including a pair of flanges 22 locating in between the first and second panels (see Fig. 1). At the time of the invention, it would have been obvious to a person of ordinary skill in the art

to combine Porter (-645), (-589) and Menchetti (-317). The motivation for doing so would have been to provide an electrical conduction within the insulated panel system.

3. Claims 1, 4, 5, 9, 10, 12-13, 17-18, 20, 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Porter (U.S. Pat. No. 5,771,645), (U.S. Pat. No. 5,497,589) in view of Menchetti (U.S. Pat. No. 5,383,317).

With regards claims 1, 4, 5, 9, 10, 12-13, 17-18, 20, 23 Porter (-645), (-589) and Menchetti (-317) disclose the claimed invention except for the tolerance of the thickness of the struts and panel. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to obtain critical tolerance of the thickness, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art.
